

Problem Statement – AI-Powered Travel Planner Agent

The Challenge

Planning a trip requires searching across multiple websites for destinations, hotels, transportation, budgets, attractions, and travel tips. This process is time-consuming and often results in inconsistent information. Users need a single intelligent assistant that can generate personalized travel plans based on destination, budget, duration, and travel preferences.

The Objective

Build an AI-powered Travel Planner Agent using IBM Bob and IBM Granite that provides personalized travel itineraries, recommends hotels and transportation, suggests attractions and local food, estimates budgets, and offers travel tips through an intelligent multi-agent workflow.

Expected Features

- Personalized itinerary generation
- Hotel and transport recommendations
- Budget estimation
- Tourist attraction suggestions
- Travel tips and safety guidance
- AI-powered conversational assistance

Technology Stack

IBM Bob, IBM Granite, IBM watsonx.ai, IBM Cloud Lite, RAG, GitHub.
